Projects

ALVAR

This website is for a company name as ALVAR. It is a global leader in transforming the way foods are processed.

ALVAR supports the production of high quality, safe and affordable food by providing software, services, systems and solutions to the fish, meat and poultry processing industries. In this project, I worked as a React Developer.

URL: <https://alvar.is/>

ONLINE VETERINARY DOCTOR APPOINTMENT SYSTEM

This website is employed to manage pet animal's owner detail and its medical treatment. In this project, I worked as a front end developer.

STRIDE

This website was for hotel apartment booking management system.

In this project, I worked as a full stack developer. Here Node.js is used for backend and React.js is used for the front-end.

Defigames

This website is based on React.js with the integration of Web 3 and backend in Node.js. This is P2E (Play to earn) game based on Solana Blockchain, I wrote simple, clean and solid code for all the modules.

URL: <https://wheel.defi-games.io/>

GETSETPLAY

This website for Online live streaming Games, User can create own channel, and can start streaming.

In this project, I worked as a full stack developer. I created APIs in Node.js and integrated them with React.js.
